

Anatomic Hygiene Seat

Anatomic Hygiene seats

An individually "tailored" Anatomic Hygiene seat with a functional seating position can provide a solution for clients with challenging seating problems. The seat can then be mounted on to the chassis/frame of the Clozitt chair.

An Anatomic Hygiene Seat provides effective support and relief where needed in order to maintain symmetry and/or to correct poor posture.

In an Anatomic Hygiene seat only our imagination can set the limits of what is achievable in our quest to provide a functional seating solution.

The seat is suitable for children, young adults, and adults with a variety of neuro-muscular difficulties, including cerebral palsy, muscle disease, MS, spinal cord injuries, and fluctuating muscle tone.

Our experienced personnel can provide a casting at the client's centre or home, as we use state of the art equipment that can be taken directly to our clients.

A cast Anatomic seat can also be manufactured from the same plaster form. The seat can then be mounted on a chassis of your choice for outdoor or indoor use.

Accessories can include a head support, foot support, arm supports, chest harness and lap belt. All are then adjusted to suit the users individual requirements.

Manufacturing takes place in three stages

STEP 1 Examination:

A precise examination of the client is made in order to accurately assess their needs. This is done along with the client's clinician.

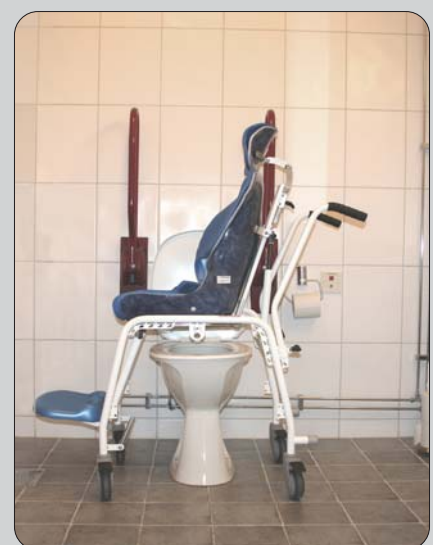

STEP 2 Casting:

Much time and care is put into the casting process in order to obtain a functional seating position.

STEP 3 Testing:

Anatomic Sitt's personnel test the seat thoroughly before it is delivered to the client.
